Equation (28) in the published manuscript must read

$$\text{Ra}_D = \text{Ra}^{3/2} \text{Pr}^{1/2}. \quad (1)$$

Please note the extra multiplication by $\text{Pr}^{1/2}$ on the right-hand side.

Since the algebra for the stability analysis is carried out directly using Ra_D and since we set $\text{Pr} = 1$ everywhere, this leaves the entire analysis and all results of the paper unchanged.
